PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience in designing and deploying production-grade cloud infrastructure and CI/CD pipelines on AWS. Skilled in Kubernetes (EKS), Terraform, Docker, Jenkins, and GitOps practices. Experienced in building scalable containerized applications, implementing Infrastructure as Code, and configuring monitoring and observability systems. Actively seeking Junior DevOps / Cloud Engineer roles to contribute to scalable cloud infrastructure and automation initiatives.

WORK EXPERIENCE

Certificates

HCL Tech | DevOps & QA Automation Engineer Intern

- Engineered 3+ CI/CD pipelines using Jenkins and GitHub Actions, reducing manual deployment effort by ~40%.
- Containerized applications using Docker and integrated them into automated deployment pipelines.
- Resolved 15+ pipeline failures by analyzing logs and improving build scripts, increasing pipeline stability.
- Contributed to ANCRA (CDP) automation framework enhancements in enterprise-level testing environments.

Sep 2024 – Nov 2025

VR Dakshin Pvt Ltd | Networking & IT Support

Jun 2023 - Jul 2023

- Supported network infrastructure setup including routers and switches configuration, Assisted in troubleshooting LAN/WAN connectivity issues.
- Performed system maintenance and hardware diagnostics for enterprise users, and gained hands-on experience in network security fundamentals and system administration.

EDUCATION

Anna University

Chennai

BE (CSE) – Sri Muthukumaran Institute of Technology, Chennai | CGPA: 7.89 | 2021 - 2025

12th Grade – Chennai Corporation Higher Secondary School, Chennai | 76.94% | 2021

PROJECT EXPERIENCE

Production Deployment on AWS EKS (DevOps Dashboard)

github.com/Mr-Surendar

Tech Stack: AWS (EKS, EC2, VPC, ALB, IAM), Terraform, Docker, Kubernetes, Jenkins

- Provisioned AWS infrastructure (VPC, subnets, route tables, IAM roles, security groups) using modular Terraform architecture.
- Configured and deployed Kubernetes cluster using AWS EKS with worker nodes and auto-scaling configuration.
- Implemented ALB Ingress Controller for external traffic routing to Kubernetes services.
- Designed three-tier VPC architecture separating application, database, and public access layers.

CI/CD Pipeline with Helm & Argo CD (GitOps Implementation)

Tech Stack: Git, Helm, Kubernetes, Argo CD

- Designed end-to-end CI/CD pipeline automating build, Docker image creation, registry push, and Kubernetes deployment.
- Created reusable Helm charts for environment-specific Kubernetes configuration.
- Implemented GitOps deployment model using Argo CD for automated synchronization with Git repositories.

Infrastructure as Code Automation

Tech Stack: Terraform, AWS (VPC, RDS, EC2, IAM)

- Developed reusable Terraform modules for EC2, RDS, VPC, and IAM provisioning
- Automated infrastructure deployment across dev and staging environments and Implemented environment isolation and state version control.

Monitoring & Observability Implementation

Tech Stack: Node Exporter, Prometheus, Grafana

- Deployed Prometheus and Grafana stack for Kubernetes monitoring, Configured Node Exporter and custom metrics collection.
- Created dashboards for CPU, memory, pod health, and network performance, Implemented alerting rules for production-level monitoring simulation.

SKILLS

DevOps tools & Cloud: Git/Actions, Jenkins, Docker, Kubernetes, NGINX, Ansible, Prometheus, Grafana, SonarQube, Trivy, Argo CD, Helm, AWS (EC2, EKS, VPC, ALB), Azure/ GCP

Infrastructure as Code: Terraform (Modules, Remote Backend, State Locking)

Scripting: Python, Bash / **Databases:** MongoDB, SQL
